Portfolio: mr.abidakash.dev

Professional Summary

With 3+ years of hands-on experience designing resilient distributed systems, enterprise ERP/HRM platforms, and cross-platform applications. Skilled in building high-performance backends (Node.js, PostgreSQL, MongoDB, Redis), modern frontends (React, Next.js, TypeScript), and hardware-level integrations (ZKTeco biometrics). Adept at processing millions of telemetry events and translating complex operational requirements into production-ready software.

Core Competencies

- **Front-End:** React.js, Next.js, TypeScript, RTK, Tailwind CSS
- **Mobile:** React Native, Expo, NativeWind
- **Back-End:** Node.js, NestJS, Express.js, Webhooks
- **Databases:** MongoDB, PostgreSQL, MySQL
- **Desktop:** Python, Electron.js
- **DevOps & Tools:** Prisma ORM, Payload CMS, Git, Docker, Linux, Coolify, Cloud Server
- **Integrations:** ZKTeco Biometric Devices, Google APIs, GoHighLevel CRM, Firebase Push Notifications

Professional Experience

Software Developer

SkillersZone LTD, Bangladesh

Nov 2024 – Present

- Engineered a scalable ERP platform covering HRM, CRM, and Task Management using React, Express.js, MongoDB, and Redis.
- Engineered an enterprise HRM & Payroll system with ZKTeco biometric integration over TCP/IP, automating attendance synchronization, dynamic shift policies, and monthly payroll with advance recovery.
- Built a task management system used by 100+ employees, enabling real-time task tracking, progress reporting, and centralized workflow management.
- Optimized the CRM module to manage thousands of sales leads using MongoDB and Redis caching, improving search performance, responsiveness, and lead-pipeline management.
- Engineered a cross-platform employee monitoring and remote management solution supporting hundreds of users across Windows and macOS, processing and synchronizing millions of activity records and telemetry events.
- Built a fully featured Digital Soft Card Super Admin and Company Admin dashboard, enabling centralized company management, employee administration, and digital business card management. [softcard.app](#)

Software Developer

FutuRexa Solutions, Inc. (Remote)

June 2025 – September 2025

- Developed and deployed an AI-driven partner and referral platform with automated onboarding and validation workflows.
- Integrated GoHighLevel CRM via API automation to streamline lead capture and follow-up sequences.
- Implemented Google Maps API for location-based tradie matching (5–10 km radius search).
- Integrated Google Calendar API for real-time availability scheduling.
- Refactored a membership management portal enabling desk managers to manage client check-ins, check-outs, payments, memberships, and attendance records.

Freelance Full-Stack Developer

Remote

Nov 2023 – Present

- Delivered custom full-stack applications for international clients.
- Designed scalable architectures and implemented secure backend systems.
- Provided post-deployment optimization and performance improvements.

Projects

- **KaajLagbe (On-Demand Home Services Marketplace):** Built a full-stack service marketplace connecting homeowners with verified local service professionals across Bangladesh. Built a progressive web app (PWA) and cross-platform mobile app featuring geolocation-based tradie matching, job posting, real-time quotation and bidding, in-app messaging, and automated push notifications.
Tech: Next.js, React Native (Expo), TypeScript, MongoDB, Tailwind CSS, Firebase. [Website](#), [Play Store](#)
- **Enterprise HRM & Payroll System:** Architected and built a comprehensive HR and payroll management platform featuring hardware-level integration with ZKTeco biometric devices via TCP/IP. Implemented automated cron-driven attendance synchronization, dynamic shift policy mapping, late/early-departure tracking, and multi-tier leave approval workflows. Engineered an automated payroll engine computing net salaries with overtime, policy penalties, loan/advance deductions, and PDF payslip generation.
Tech: Next.js, React, TypeScript, Ant Design, Tailwind CSS, MongoDB, node-zklib.
- **ERP Platform:** Built a scalable ERP solution featuring CRM and Task Management modules capable of efficiently managing thousands of leads using Redis caching and PostgreSQL optimization.
Tech: React.js, RTK Query, Node.js, Express.js, MongoDB, Redis.
- **PC Monitoring & Remote Management Platform:** Engineered a cross-platform enterprise device monitoring and remote management platform supporting Windows and macOS. Built desktop agents using Python and Electron.js to process and synchronize **millions of activity records** from **hundreds of managed endpoints**, including application usage, browser activity, clipboard events, screenshots, screen recordings, and system telemetry. Engineered a scalable backend and centralized web dashboard for real-time monitoring, remote administration, and efficient analysis of high-volume telemetry data using MongoDB.
Tech: Python, Electron.js, React.js, Node.js, Express.js, MongoDB.
- **Digital Soft Card:** Built a fully featured Super Admin and Company Admin dashboard for managing organizations, employees, and digital business cards, while also contributing bug fixes and feature enhancements.
Tech: Next.js, Node.js, Express.js. <https://softcard.app>
